

Due to the nature of work, some existing landscaping and trees had to be removed on public and private properties. The District vowed to restore landscape elements and greenery to its original, or better, condition as part of the project. The District kept its committed and planted over 50 trees and dozens of plants and shrubs in residential areas and public spaces. This effort beautifies the areas now and in the future.

*An SASD truck is loaded with plants and flowering shrubs from a local vendor for staff to restore landscape areas disturbed by construction.*

*SASD had contractors repave and stripe the Creekside Apartment Complex parking lot after work on the property was complete. SASD staff planted flowers alongside the newly resurfaced lot.*

**BEFORE**

**AFTER**

The District extends gratitude to our neighbors and customers for their support during the project. Contractors had to access properties and obtain easement permits to complete work. Project completion within the set timeframe would have been difficult without property owner cooperation. Thank you!

*Homeowner on Pope Street allows construction to be completed within its property's easement. Restorative planting was completed.*

*New sewer pipe is installed right next to home on Pope Street. Restoration work included backfill and landscaping.*

*Trees were planted on a residential property as part of the restoration effort.*

**A text received from a satisfied resident: "We've seen the plants and the follow up waterer! THANK YOU. One hydrangea was wilted but we think we caught it in time and we're ever so grateful for your overseeing care. I'm VERY HAPPY with the tree replacements. Thank you so much. They're lovely. And they [sic] hide buildings and cars when they get bigger."**

**We are Here to Serve You!  
Clean Water! It is what we do!**
